

Top 10 Cyber Kill Chain Must Haves

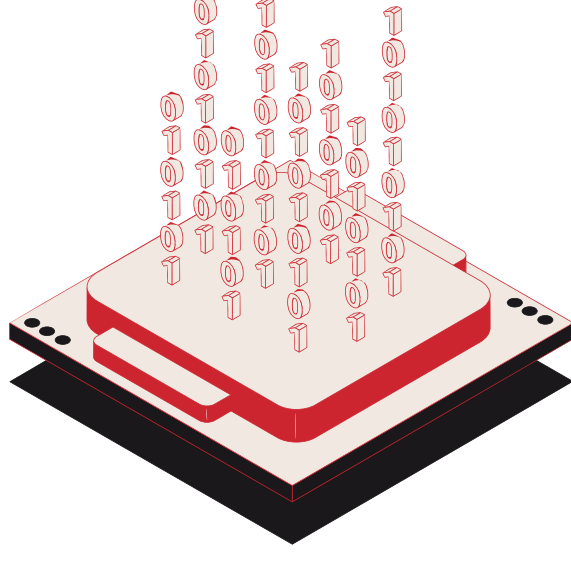

Risk and cybersecurity executives tell us every quarter about their must haves.

Here are their most urgent ones.

01

Data Confidentiality

Provide guidance to business partners to ensure compliance with information security regulatory requirements and internal policy.

02

Cyber Strategy

Ensure your strategy has involvement assessing risk and developing security controls at your organization appropriate level.

03

Business Processes

Track information security risk posture metrics aligned with business criticality and value.

04

Reverse Engineering

Ensure cross functional business process in place for cloud security control engineering and implementation with proper visibility and approvals.

05

Red Teaming

Partner with the Head of Security Operation to define and produce actionable, value demonstrating metrics for the team and key business stakeholders.

06

Independent Group

Be certain that your group prepares system security reports by collecting, analyzing, and summarizing data and trends.

07

Data Sources

Perform extensive data analysis, aggregation, event correlation and information security threat definition.

08

Critical Assets

Certify your team is involved in IT security and privacy risk assessments and audits of IT general security controls.

09

Cyber Resiliency

Invest in development and implementation of the information security risk assessment strategy, methodology, and process.

10

Where to spend

Perform threat hunting operations across numerous data sets and security products to identify new and emerging adversary TTPs.
